Need Better Roads

The following letter was received by L. D. King and was read at the last meeting of the Board of Trade. The letter explains itself.

Mr. King,
King Motors,
Raymond, Alta.
Dear Sir:

We beg to advise that arrangements have been made to show the trail from three miles north of New Dayton westward through Raymond to Magrath, and the words "Raymond" and "Magrath" will both be shown on the map in as large type as is possible to show them in the limited space. This trail is being shown "green." In case you have not arranged to paint the trail we would urge that it be done without further delay, as the map will be off the press next week.

We are arranging to show an auto camp at Raymond on our Strip Maps, and trust that you will carry out the arrangements of the camp along the lines discussed with the writer.

In regard to the trail from three miles north of New Dayton westward to the connection north of Magrath, we would urge that steps be taken with the different municipality districts to have it put in better condition than when the writer drove over. The culverts need attention as well as the highway.

If you desire some of the new maps, we will be pleased to send them to you as soon as they are printed. The cost of the maps will be around \$5.00 per hundred or less, depending on the bill we receive from the printers. Kindly acknowledge receipt of this letter, and oblige.

Yours very truly,
Calgary Auto Club,
Per W. S. Deisman.

Dave Powelson is now busily engaged in getting his share of the quinquennial census for Ottawa.

Mr. and Mrs. S. B. Card will leave on July 1 on a two week vacation to Vancouver.

BIG DANCE at the Opera House tomorrow (Saturday) night. The Premier Orchestra in attendance.

News Notes

Born to Mr. and Mrs. Floyd Woolf (nee Miss Zella Jeffery) a daughter.

Acreage in sugar beets in the irrigated districts of southern Alberta will reach 7,000 acres this season. This is 1,000 acres more than the contracted area of last season.

Mr. Ingram, weed supervisor for this district, is here looking over the district. With the co-operation of the people he expects to clean up the weeds in this district.

You must see "The Wanderer" which is showing tonight and Saturday at the Rex Theatre. Without question it is one of the most lavish productions ever filmed and is said by several to excel the Ten Commandments. The Premier Orchestra will be in attendance Friday night.

Grant Card left last Wednesday for the boundary where he will spend a few days hunting horses.

The Raymond 1st ward won the opening game of the M Men Baseball League at Stirling last Saturday by a score of 24-2.

At the meeting of the local trade board last Saturday it was decided that the stampede program will be much after the order of last year's list of events. Posters and program dodgers will be issued.

The Boy Scout Organization is in charge of our Dominion Day celebration. No details of the program are as yet available.

The Raymond Rustlers is the new name attached to the local baseball nine. It sounds somewhat more aggressive than last year's title. The Robins, and considering the way the boys have played this season, is a far more suitable name.

Who will be the town Constable? is the question we have heard frequently of late. It is said that four applications are in the hands of the town council. A selection will probably be announced about the time this sheet is off the press.

News Notes

Mary Redd has moved the Merrie-Maid Shoppe from the Post-office Building to her residence on Church street.

The last of the concrete for the new cement sidewalks was turned over this week. Regardless of complaints heard concerning grades, rough finish, etcetera, the new walks are a bigger improvement to the town than any one thing we have enjoyed for the past hundred years.

A good crowd was out to greet Premier Brownlee and Lawrence Peterson, M. L. A., last Friday. A well attended banquet was held in their honor in the evening at the Hotel Raymond.

P. W. Cope will soon move into his new residence just south of the of the Second Ward Chapel. Bid Meldrum's new residence is also being pushed to completion. More houses like these will improve Raymond's appearance to a marked degree.

According to reliable current reports S. F. Kimball has sold his residence here to the sugar company, and has purchased a home in Salt Lake City where he will live in the future. As to who will be the new town secretary is a matter of speculation.

Remember the dance at the Opera House every Saturday night. Music by the premier Dance Orchestra.

Mrs. George Shields accompanied by her daughters, Mrs. George Terry and Mrs. J. B. Linkous, will leave for Salt Lake tomorrow to attend the annual Shields' reunion.

Here and There

Charles Reddock, housemover of Calgary, Alta., has undertaken what seemed to be an impossible task of moving sixty houses over mountain roads from Bankhead to Banff. In forty days he moved thirty-eight of the houses six and a half miles.

Exports from Canada for the month of February were \$87,512,147 while imports were recorded at \$70,908,980 for the same period. For the twelve months ending February 28 last, exports reached a value of \$1,297,744,683 while imports were fixed at \$911,107,055.

One of the largest business transactions recorded in the West took place here on March 11th last when the Canadian Co-operative Wheat Producers mailed approximately 190,000 cheques amounting to a total of \$37,000,000, to members of the wheat pool.

The rapid development of the fish oil and fish products industry on the Pacific coast this year may necessitate the fitting up of three coastwise vessels as tankers to carry oil from the reduction plants. Last year one vessel found this method successful. Fish reduction plants, it is estimated, will produce 10,000 tons of fish meal and fertilizer this year.

President E. W. Beatty, of the Canadian Pacific Railway, has asked approval of the shareholders for the construction of two new passenger vessels of the type of "Montcalm," "Montclare," and "Montrose," to be available for service in May, 1927, and five freight vessels of 8,500 tons, with a sea speed of about 14 knots, also to be ready for 1927.

During the past season 1,235 moose and 3,508 deer were killed in New Brunswick. Of the former 207 fell to the guns of non-resident hunters and 617 of the latter. In the same year animals killed for fur included 1,567 raccoon; 6,017 skunk; 13,314 muskrat; 5,410 foxes; 9,479 ermine; 177 martin; 2,823 mink; 105 otter; 67 fisher and 192 bear.

Next time try the finest grade
-- Red Rose Orange Pekoe Tea.

This Wonderful Age

Recently within the short space of one week two exploration parties crossed the North Pole without mishap and in comparative comfort, thus realizing what has been the ambition of daring and adventurous men for centuries. Their achievements were rendered possible by the use of the air routes instead of by ship through the treacherous waters of the Arctic seas.

Daily communication is maintained between London and Paris by airship, carrying passengers and freight, the time schedules being as regular as those of the best managed railways, and a few weeks ago the trip from London to Paris was made in ninety minutes by an airplane carrying a score of passengers and several tons of express freight.

Throughout large sections of the United States mail is now transported by airplanes with the result that important letters are delivered thousands of miles away within a few hours of mailing whereas formerly days were necessary for their despatch. Regular mail services by air are now established and maintained right across the continent, and the number of such routes is increasing every year.

Within the short span of one generation the horse and buggy has been superseded by the automobile with its small, compact internal combustion gasoline engine, as a means of conveyance on our highways, and a day's journey of a few years ago is now only a matter of hours, or even minutes, and hundreds of thousands of people who never dreamed of keeping a horse and buggy now have their horseless carriages.

When the electric telegraph, the telephone, and finally the trans-Atlantic cable came into operation most people felt that the last word in rapid communication had been written, and now almost overnight has come the marvelous development of radio whereby the most remote and inaccessible places in the world can be kept in constant touch with centres of population and activity. The successful flights over the North Pole were known to the world within a few hours. No longer are ships at sea isolated between ports, and one in distress can call others to its assistance just as a sick person in a city can summon his doctor by telephone.

Photographs of scenes in connection with the great British strike were printed in New York papers the following day, transmitted across the Atlantic by radio, and even on these Western prairies these pictures were reproduced within three or four days whereas last year such pictures would not have been available here for two weeks or more.

In another way time and distance and cost of operation are being reduced in the West through the introduction of oil-electric cars on our steam railways, thereby also eliminating the smoke and other discomforts of travel.

For centuries the enormous powers in our great rivers, canyons and falls have been pure waste because untapped. Now this cheapest of all known sources of power is being harnessed the world over and placed at man's disposal, with the result that not in cities alone but in the rural home the benefits of electric light, power and heat are available, while all industry has entered upon a new era of expansion.

Within the memory of people still living the tallow candle has given way to the electric light and now by the cheaper, more efficient tungsten lamp. The finest lectures, the best music, the current news of the day is carried by radio into the humblest and most isolated home, and it does not require much imagination to foresee that at no distant date people everywhere will be able to witness as well as hear these far distant occurrences.

Julius Verne's flights of fancy in "Twenty Thousand Leagues Under the Sea" and "Around the World in Eighty Days" are today accepted facts and almost every day happening.

Pessimists there still are who insist that the world is becoming worse and not better, that mankind is headed for destruction, that with increase of population the world will not be capable of producing enough food to sustain life, that with our prodigious use of fuel these resources will become exhausted and the race will freeze to death, and so on and so forth. Since croakers there always have been, and probably always will be, but their dire predictions always fail to be realized. Man has ever been able to solve the problems confronting him. Necessity has ever been the mother of invention, and at no time in the history of the race has inventive genius been more fertile in practical ideas, nor has science been so consistently employed to achieve important and lasting results.

Predicts Bumper Crop

May Surpass Banner Years in West Says Eastern Man

Returning from a tour of the western provinces, Thomas Bradshaw, vice-president and general manager of the Massey-Harris Company, prophesied that 1926 would see a western crop which would rival, if not surpass, the bumper years of the past. Not since 1915, he declared, had he seen the wheat crops so well advanced, the farmers in such a flourishing condition and the general tone of the west so optimistic.

Official Fairy Story Teller

The English town of Bradford has an official fairy story teller, who gathers the children about her and relates to them the tales of dwarfs and fairies, and to have entertained the young in all parts of the world for hundreds of years. Since Mrs. Mary Bradford, the official story teller, began her work, 12,926 children have sat at her feet and listened to the stories.

When a man is dead, broke he usually has very little life in him.

LEG SORES

ARE CURABLE. If you suffer from Leg Sores or Varicose Veins, I will send you ABSOLUTELY FREE a copy of my famous book that tells how to be rid of these troubles for all time by using my remarkable painless treatment. It is different from anything you ever heard of, and the result of over 35 years' specializing. Simply send your name and address to Dr. H. A. WILKINSON, Suite 28, 31 East 11th Street, Kansas City, Mo.

On A Gallon Of Gas

Car Is Said To Travel Twice As Far On A Concrete Road Than A Dirt Road on Same Gas Consumption

The country-wide improvement in public highways in the United States and Eastern Canada, has worked a remarkable increase in automotive gasoline mileage.

It is said that a gallon of gas carries an automobile 50 per cent. farther on a concrete road than on a gravel road and twice as far as on a dirt road.

Thus the character of the highway has a direct and vital bearing on gasoline mileage.

Other factors that bear directly on gasoline mileage are efficient carburetion, camshaft timing, valve size, gear ratio, ratio of power to weight, cooling system and tire equipment.

Correct design and co-ordination of these features increase the life of a gallon of gas.

COLOR IT NEW WITH "DIAMOND DYES"

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, drapery, coverings, hangings — everything!

Buy Diamond Dyes — no other kind — and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Survives Four Generations

A penny at Edwardsville, Ill., has blossomed for 136 years. In 1790, George Barashack, an early settler, sent to Germany for the plant. It has survived four generations.

THOUSANDS OF THANKFUL MOTHERS

Strongly Recommend Baby's Own Tablets to Their Friends

Once a mother has used Baby's Own Tablets for her little ones she would use nothing else. The Tablets give such results that the mother has nothing but words of praise for them. Among the thousands of mothers throughout Canada who praise the Tablets is Mrs. David A. Anderson, New Glasgow, N.S., who writes: "I have used Baby's Own Tablets for my children, and from my experience I would not be without them. I would urge every other mother of young children to keep a box of the Tablets in the house."

Baby's Own Tablets are a mild but thorough laxative which regulate the bowels and sweeten the stomach; drive out constipation and indigestion, break up colds and simple fevers and make teething easy. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Coal Waste Is Valuable Can Be Used For Perfumes and Other By-products Say Scientists

Fuel conservation was discussed as a vital problem by practical men attending the eleventh annual meeting of the International Railway Fuel Association at Chicago.

Science is coming to the aid of the railroads in this matter, the members were told in an open forum meeting on engineering factors. The slack waste in coal is soon to be taken care of by chemical processes and the day is not far off when that waste will be turned into oils, dyes, perfumes and other valuable by-products, it was predicted.

Great Demand For Romanoff Table Linen

Thousands of Pieces Sold to Americans For Souvenirs

Royal napkins and tablecloths belonging to the Romanoff family are in enormous demand in the United States. Entirely new and bearing the coat of arms of Emperor Nicholas, tens of thousands of pieces of this table linen have been sold by the state to American buyers, who sent them home to relatives and friends as gifts.

The napkins are of the finest Holland linen, are large enough to serve as tea tablecloths and cost 75 cents each.

Gives A Novel Treat

Mrs. Edward E. Sisson, of South Middleboro, Mass., has been giving her family and friends a novel treat by serving lemonade and lemon pie made from lemons picked from a tree she raised indoors. The tree now has about forty blossoms on it.

Argentine Corned Beef

Two hundred thousand pounds of Argentine corned beef arrived in Vancouver for local distribution on board the steamship West Conob, recently. This is the first direct shipment of this commodity to Vancouver.

Minard's Liniment King of Pain

Says He Felt Drunk Most Of The Time

Brooklyn. Mr. Fred G. Marquart writes: "I felt drunk most of the time. My head was dizzy. I couldn't think clearly. One day I dropped a coin and when I stooped to get it I got so dizzy I almost fell. I later found out that the cause of this condition was constipation. This was overcome by a short course of Carter's Little Liver Pills. My appetite has doubled, and my dizziness has entirely left me."

Carter's Little Liver Pills move the bowels and relieve the system of its poisonous matter. Druggists, 25 & 75c red packages.

Has Gained Nothing

Germany Sees No Advantage in Recent Treaty With Russia

Germany, with all the apparent advantages, has gained nothing from her formal and special intimacy with Soviet Russia. And at this very moment the reports of German correspondents — generally favorable to the Soviet Government — on economic conditions in Russia are gloomier than ever. What they say of the failure of Soviet export plans, the growing opposition of the peasantry, the enforced reduction of Soviet industry, the desperate expedients of a distracted administration, and the infallible registration of these facts in the steady decline of a currency stabilized with enormous difficulty, is abundantly confirmed by the dismal and embittered confessions of the Soviet press. The economic failure of the Soviet regime is now notorious in Russia and adds a new burden to the oppression of the Soviet oligarchy. — London Times.

New Color Process

Inventor Claims Wonderful Possibilities From His Electrical Machine

A multi-colored electrical impress invented by Justice C. Zubil, an engineer in the Puget Sound navy yard at Bremerton, Wash., to print any color on any surface, is among the inventions to be shown at the national invention exposition in 1926.

Fun At The Exhibition

Six Platform Acts Booked For Western Canada Fairs

Six big platform acts for the Western Canada fairs circuit have now been booked and will make their first appearance on the loop in Brandon on June 28.

The Boganny, Lunatic Bakers, brought over from London by the Shuberts, will provide a comedy act. The Petleys present an exhibition of trampoline and comedy casting stunts, while the Lime trio give an acrobatic turn. Dennis Curtis brings along a dog and pony show, while the Australian Waltes are reputed to be the world's leading whip cracking and boomerang artists. Shorty Flem, the rube cop, will provide all the clowning stunts on the grandstand.

Are Your Nerves On Edge?

\$12,400,000 In Oil

Notice of incorporation of no fewer than 19 oil companies in Calgary, Edmonton and Saskatoon is given in a recent issue of the Canada Gazette. The companies have an aggregate capitalization of \$12,400,000.

A Tower Of Pearls

Japan To Have Interesting Exhibit at Philadelphia Fair

Tokio. — A miniature tower of pearls, both cultured and natural, will form part of Japan's exhibit at the Philadelphia Sesqui-centennial exposition. It will have a value of approximately \$350,000.

The exhibit is constructed in the shape of a pagoda, is slightly over three feet high and contains 201,230 cultured and 29,270 natural pearls of varying sizes. The display has received the approval of the Empress.

Tighten Border Defences

Rum Running and Smuggling to be Curbed at Border

Border defences against rum running and other smuggling of contraband goods has been so tightened during the last year or so that the spring rush is not the success it formerly was. Piousness crossing of the border with cargoes of liquor has been forced to give way to carefully organized run-running, largely owing to the fact that customs and immigration forces are co-operating in an effort to dam the flow of Canadian liquor into the United States.

Good Blood Isn't Everything

The child of a King must be taught which spoon to use.

Use Minard's Liniment in the Stables

As a vermifuge an excellent preparation is Mother Graves Worm Exterminator. It has saved the lives of countless children.

Self-Poisoning Increasingly Common

Modern Living Habits Promote Self-Poisoning — Thousands are Victims

The average man or woman does not enjoy consistent good health. Loss of appetite, headaches, biliousness and a lack of enthusiasm for either work or play are constant complaints.

Scientists have ascertained that such a condition is usually caused by self-poisoning resulting from constipation. Due to modern living habits, the natural secretion which promotes regular elimination by softening the bowel contents, is often deficient — especially among middle-aged people. The poison from waste matter remaining in the systems of people thus affected is the insidious enemy of good health.

Such people need *Nujol*, because *Nujol* softens the waste matter and permits thorough and regular bowel elimination without overtaxing the intestinal muscles. It helps Nature help you.

Ask your druggist for *Nujol* to-day — and remember, look for the name "*Nujol*" in red on both bottle label and package.

Minard's Liniment King of Pain

When sudden sickness comes, when the kiddies come in with colds, their little chests and throats sore from coughing, quick results always follow a vigorous rubbing with good old *Nerviline*. If it's Cramps, Colic, Diphtheria, *Nerviline* is a wonderful friend; it brings ease and comfort so quickly. For young and old, to overcome the minor ills that constantly arise in the home, nothing compares with "*Nerviline*." — 35 cents at all dealers.

Fire Hazard In West High

People Should Use Extreme Caution In Bush Areas

The most serious fire hazard obtaining in recent years exists at the present time in Western Canada, according to W. L. Bemister, supervisor of fire protection for the western region of the Canadian National Railways. In view of the dangerous condition of the bush areas and the unventilated portions of the prairie, Mr. Bemister urges the adoption of extreme caution by all persons going into the woods at the present time and by parties picnicking or practicing individual clean-up days outside of the city limits.

Don't think that every sail-eyed woman is loved and hot him.

One thing that made the powerful preachers of other days was receptive listeners.

SPRAINS.

Apply Minard's at once. It draws out inflammation, soothes the muscles and ligaments.

MINARD'S LINIMENT

"KING OF PAIN"

Russia Has Large Army

Under Circumstances Other Continental Powers Cannot Consider Disarmament

Russia has one of the largest armies on the continent. She is not a member of the league; she is not on friendly terms with most of her neighbors; she is suspected of fishing in Europe's troubled waters on all possible occasions. Under the circumstances no continental power will consider disarmament while Russia, fully armed, maintains moral and material isolation. — Brooklyn Eagle.

Self-Poisoning Increasingly Common

Modern Living Habits Promote Self-Poisoning — Thousands are Victims

The average man or woman does not enjoy consistent good health. Loss of appetite, headaches, biliousness and a lack of enthusiasm for either work or play are constant complaints.

Border defences against rum running and other smuggling of contraband goods has been so tightened during the last year or so that the spring rush is not the success it formerly was. Piousness crossing of the border with cargoes of liquor has been forced to give way to carefully organized run-running, largely owing to the fact that customs and immigration forces are co-operating in an effort to dam the flow of Canadian liquor into the United States.

Good Blood Isn't Everything

The child of a King must be taught which spoon to use.

Use Minard's Liniment in the Stables

As a vermifuge an excellent preparation is Mother Graves Worm Exterminator. It has saved the lives of countless children.

Self-Poisoning Increasingly Common

Modern Living Habits Promote Self-Poisoning — Thousands are Victims

The average man or woman does not enjoy consistent good health. Loss of appetite, headaches, biliousness and a lack of enthusiasm for either work or play are constant complaints.

Scientists have ascertained that such a condition is usually caused by self-poisoning resulting from constipation. Due to modern living habits, the natural secretion which promotes regular elimination by softening the bowel contents, is often deficient — especially among middle-aged people. The poison from waste matter remaining in the systems of people thus affected is the insidious enemy of good health.

Such people need *Nujol*, because *Nujol* softens the waste matter and permits thorough and regular bowel elimination without overtaxing the intestinal muscles. It helps Nature help you.

Ask your druggist for *Nujol* to-day — and remember, look for the name "*Nujol*" in red on both bottle label and package.

Minard's Liniment King of Pain

When sudden sickness comes, when the kiddies come in with colds, their little chests and throats sore from coughing, quick results always follow a vigorous rubbing with good old *Nerviline*. If it's Cramps, Colic, Diphtheria, *Nerviline* is a wonderful friend; it brings ease and comfort so quickly. For young and old, to overcome the minor ills that constantly arise in the home, nothing compares with "*Nerviline*." — 35 cents at all dealers.

Fun At The Exhibition

Six Platform Acts Booked For Western Canada Fairs

Six big platform acts for the Western Canada fairs circuit have now been booked and will make their first appearance on the loop in Brandon on June 28.

The Boganny, Lunatic Bakers, brought over from London by the Shuberts, will provide a comedy act. The Petleys present an exhibition of trampoline and comedy casting stunts, while the Lime trio give an acrobatic turn. Dennis Curtis brings along a dog and pony show, while the Australian Waltes are reputed to be the world's leading whip cracking and boomerang artists. Shorty Flem, the rube cop, will provide all the clowning stunts on the grandstand.

Are Your Nerves On Edge?

\$12,400,000 In Oil

Notice of incorporation of no fewer than 19 oil companies in Calgary, Edmonton and Saskatoon is given

Tourists In Increasing Numbers Now Coming To Western Canada Are Offered Many Attractions

The mental picture of the Canadian west is a vision splendid. Were an onlooker to view the scene from above, Winnipeg, the eastern gateway of the prairies, and have his range of vision sufficiently extended, he would see spread out to the westward a vast, gently rolling, fertile plain, gradually rising to the foothills of the Rocky Mountains, over nine hundred miles away. On the right, the northern edge of the prairies merges into a transition zone of mixed prairie and woodland, commonly called "the park belt," and north of this, and stretching away indefinitely, is a belt of forest land, interspersed with lakes and waterways. In the extreme southwestern corner near the Rockies appears a stretch of ranching country. Fed by the melting snows and glaciers of the Rocky Mountains, the majestic Saskatchewan drains the whole plain and pours its tawny waters into the inland sea of Lake Winnipeg to be thence discharged through the Nelson River into Hudson Bay. Through the prairie belt extend three transcontinental railway lines with innumerable branch lines crisscrossing in every direction and stretching out into the north country. The most striking feature of the landscape viewed from above is the vast checkerboard effect produced by the system of surveys which divides the whole country into blocks one mile square, by roadways running due east-west and north-south. In these provinces the Dominion of Canada has the greatest continuous area in the world laid out in astronomically based subdivisions.

Dealing with the territory by and large, the prairie is the great wheat production; the patches and foothills contain about 15 per cent. of the world's coal reserves; the southwest corner is the ranching country; the forest belt north of the park lands is the chief seat of the lumbering industry, and the home of the fur-bearers; the Laurentian range across the north-east is now the scene of metalliferous mining development; and from the great rivers and lakes come the whitefish and sturgeon which supply the tables of half the continent.

The prairies, which in fifty years have advanced from a Great Lone Land to a densely populated area, wherein the production of all kinds of grain has attained to the total of almost one thousand million bushels per year, are naturally the centre of interest. In this area which has a population of over two millions are located the capitals of the three provinces and other centres of distribution and manufacturing, the rapid rise of which has been the romance of the past twenty-five years.

The attention of the onlooker is drawn to the all-embracing road system, not by a sight of the roads themselves, for they are, for the most part, so hidden by the tall verdure that the whole country appears to be an unbroken wheatfield, but because of the constant passing to and fro across the landscape of heavily laden farm wagons and of a countless number of motor vehicles of every description. Automobiles are indeed everywhere, for it is not hard to say that the west appears to have been created for the automobile and the automobile invented for the west. The advantages of this checkerboard road system, which has done so much to assist in the rapid development of the country, are at once appreciated by the visitor, for a glance at a map or a short run along any highway shows him that in whatever direction he desires to travel he can do so as readily as he can take his way about the streets of his own home town. He sees that if he proceeds, say west, he will within a mile come to a road running north and south, and that travelling on this road in either direction for a mile he will reach another crossroad parallel to the first. He need not ask questions. He simply starts his car, makes the necessary turnings and reaches his destination. It is almost impossible to lose oneself.

The tourist has before him one of the most fascinating lands imaginable. Whether he desires to travel by train or steamboat, automobile or canoe, whether his tastes incline to palatial hotels, bungalow camps, or tents, he will find ample satisfaction for every wish. Hunting, fishing and visiting mining camps are all easily compassed; should he be a canoeist he can drop his craft into the Saskatchewan or the Assiniboine and paddle over old fur-trader routes even to Hudson Bay; or if he seeks a new thrill he can travel in commodious modern steamers down the Mackenzie River system to the land of the midnight sun and the Arctic Ocean.

Where every section has its tourist

areas it is possible to mention only a few. In the east there are those about the three big lakes, Winnipeg, Manitoba and Winnipegosis; in the north is the rugged forest country, full of big lakes and rivers, the Mecca of the hunter and fisherman; the Saskatchewan valley is shared by all the provinces; the famous Qu'Appelle valley is in the centre; and along the western edge are the Rocky Mountains and foothills. On this slope of the Rockies are the largest of Canada's national parks, Jasper Park in the north, Banff Park in the centre, and Waterton Lakes Park in the extreme south. All these recreation centres have their appeal and not least these mighty mountains, with their forest-lined valleys, their upland gardens, their glaciers and snow fields, and their uncounted peaks, many of whose summits have never yet been scaled by man and which invite conquest by the energetic and the adventurous.

Dentist Says City

Smoke Injures Teeth

Smoke From Soft Coal Interferes With Ultra Violet Rays From Sun Progress made by its adventures along the nebulous trails of pure science has been formally charted for the year by the National Academy of Sciences.

The annual assembly of this little group of curious and thoughtful men ended recently and they have gone back to their remote fields of research after exchanging specimens of the foundation stones of future practical knowledge they have discovered in the last year.

Among these as disclosed in the concluding session, are bits of fact about sound, the ultra violet rays and the adrenal glands. Dr. Weston A. Price, dental research worker, of Cleveland, reported he had learned that smoke from the burning of soft coal by interfering with the ultra violet rays from the sun, was the reason that city children's teeth were more vulnerable to decay than those of their country cousins.

A man can avoid a scrape by letting his whiskers grow.

Beekeepers In Saskatchewan

Output of Honey Last Season Was Seventy-two Thousand Pounds

The average production per hive for the past two years at the University of Saskatchewan has been about 120 pounds of extracted honey, with an estimated value of 20 cents per pound. Bees have been kept successfully as far north as DeBden on the Big River branch of the C.N.R. north of Prince Albert, at Nipawin, and at Eldersley, east of Tisdale. At one apiary north of Eldersley, as much as two tons of extracted honey have been harvested in a single season.

Altogether there are about nine hundred beekeepers in the province with an output of 72,000 pounds last season.

Hemp Growing

Two firms are interested this spring in increasing the acreage of hemp grown in Manitoba. The Manitoba Cordage Company announces that it has made contracts with a large number of farmers to grow this product, guaranteeing from \$12 to \$15 per ton for hemp straw delivered at their nearest breaking mill.

It isn't always modesty that keeps people from telling the naked truth.

Faith In The Future Of Canada Supported By A Reference To Experience Of The United States

Saskatchewan Butter

Interest In Dairying Increasing With Farmers Throughout the Province

With interest in dairying increasing among farmers all over Saskatchewan, creamery butter production in the province during April totalled over 1,050,000 pounds. This is an increase of 325,467 pounds, or a little better than 45 per cent. over the output a year ago.

In the first four months of this year production totalled 3,418,000 pounds, or an increase of 23.9 per cent. over the output during the corresponding period last year.

Four new creameries have been opened in the province this year and five additional plants are now under way.

Seven women now hold flying certificates from the Royal Aero Club of Great Britain.

It is always interesting to read the views of publicists in other countries on economical conditions in our own and particularly so when those views are of an optimistic and encouraging character. It is refreshing, therefore, to read in a United States contemporary, a statement of faith in the future of Canada, supported by reference to experiences which the United States itself underwent before it reached its present progressive and happy economical condition.

A member of the Canadian Parliament, writes the Detroit News, states that "Canada is a vassal of the United States," reporting him as saying, "We are paying tribute to the United States to the extent of \$250,000,000 every year, \$200,000,000 of which we pay in imports and \$50,000,000 on money borrowed, on which the News comments editorially, as follows:

"If that constitutes vassalage, then the United States was the vassal of the rest of the world, chiefly Europe, for almost 100 years; for it was not until about 1880 that our exports began regularly to exceed our imports in value, and it was considerably after that date that we ceased to pay Europe huge dividends on borrowed capital."

"If Canada is spending \$200,000,000 a year for American goods, it is a sign that somehow or other she is making the money to pay for them. She is farming, manufacturing, exporting, creating wealth; and part of this wealth she exchanges for American products. Why does she buy these goods? Because she is not self-sufficient. Would she gain by making these goods for herself? Not unless she could make them more cheaply than she can buy them."

"If Canada is spending \$150,000,000 a year for money borrowed from the United States, she is pursuing the same course we followed while we had immense undeveloped resources and small accumulations of capital. We borrowed money where we could get it, and paid high interest on it; but we put that money to very good use. If Canada is doing the same with the capital she has borrowed from the United States, she is following a successful example. She should be thankful, for by putting that money to productive work she will one day emerge from the state of 'vassalage' that seems to worry the worthy member of parliament."

"One has but to cast an eye over the map of Canada—a vast territory with extraordinary possibilities—and think of what the people of the United States did to the 'Great American Desert,' to see that any Canadian who is pessimistic about his country is—well, to say the best, he is short of vision."

Sunflowers For Silage

The Effect of Sunflowers on the Following Crop

Sunflowers have gained considerable promise as a silage crop during the last few years, owing largely to their hardiness which allows them a longer growing season than corn and makes them a more certain crop. They require less moisture than corn and make a good substitute for it in districts in which the summer season is comparatively short, the nights cool and the precipitation scanty. There has been some doubt, however, as to the effect of sunflowers on the succeeding crop, as little was known of their plant food requirements. In order to determine their effect on the following crop an experiment was conducted at the Rotham, Saskatchewan, experimental station. Corn and turnips were used for comparison. In the two years of the experiment, wheat and barley, following turnips, showed somewhat higher yields than when they followed sunflowers. The difference was considerably more striking when corn was used, 19.6 bushels of wheat being produced following that crop compared with 11.5 bushels following sunflowers. As the experiment has lasted only two years, no definite conclusion can be drawn, but it would seem that sunflowers are more exhausting to the soil than either corn or roots.

He's A Good Digger

The skunk's naked, flat soles are wrinkled crossways, says "Nature Magazine." The hind feet show no clawmarks in the snow, but the forepaws have claws which make him one of the best diggers among all the wild folk, surpassed only by the badger and woodchuck.

Worried Patient—Doc, the other physician who looked at me yesterday disagreed with you on the diagnosis.

Doctor—There, there, never mind. I'm sure the autopsy will prove I was right.

The test of politeness is to say "please" when that makes the telegram eleven words long.

Map of a portion of the three Prairie Provinces showing the net work of main motor highways and railways which covers this area.

Advantages Of Sweet Clover

Seventeen Reasons Showing the Advantages of This Crop

(By Jas. D. McGregor, Glenora Stock Farms, Brandon, Manitoba)

1. Sweet clover will grow on practically all soils in Western Canada.
2. Is more easily started than alfalfa or any other clover.
3. Makes good pasture and hay.
4. All kinds of stock soon learn to like it.
5. Seeds heavily in all sections, and seed easily saved.
6. Feeding value equal to alfalfa, better for pasture.
7. Starts early in spring, grows all summer and in late fall.
8. Does not bloat cattle and sheep like alfalfa.
9. A biennial legume—its well in rotation.
10. Roots are soft, easily inoculated, decay rapidly.
11. As green manure will add more plant food than any other crop.
12. Will smother out nearly all kinds of weeds.
13. Will prepare heavy wet alkali land for other crops.
14. An excellent bee pasture, making white honey.
15. Will grow where other clovers and alfalfa will not: (a) On low, wet, alkali land. (b) On dry, stony, gumbo soils.
16. Alfalfa starts more easily than sweet clover, as the sweet clover roots are softer and more easily inoculated.
17. Sweet clover is no longer an experiment. Grow it, use it. It is one of God's choicest gifts to man.

Insects Wait For Weather

Scientists Say Moth Can Postpone Birthday For Years

Observations made by a British scientist have led to the belief that if the weather is bad the small egg moth can postpone its own birthday for days, months or years. The cocoon of this type is ordinarily due to open in February but if the weather is inclement the birth is usually postponed sometimes for twelve months. Moths have been known to emerge successfully after being imprisoned eleven years.

The bashful lover is always in hot water when trying to break the ice.

Many Prizes For Alberta Corn Show

Will Be Held This Year At Medicine Hat

The provincial corn show for Alberta is to be held this year at Medicine Hat under the auspices of the Alberta Corn Growers' Association. The directors are working out a prize list which will include classes for the following types of corn—yellow and white flint, yellow and white dents, northwestern dent, sweet corn and popcorn. There will also be classes for sheaves. In addition to cash prizes the directors hope to be able to secure several trophies as championship awards.

Vancouver Seeds In England

When many of the gardens in England come into bloom this year, millions of flowers from Canadian seeds will bloom among the plants of the Old Land; for England is turning to the warm climate and rich soil of Vancouver Island for its supply of choice seeds.

Married men are nearly all great inventors—of excuses.

Fine British Types for Canada

The emigration of families from Great Britain to the Dominion is rapidly increasing. The £3 fare and generous arrangements under the 3,000 Families Scheme are inducing more to travel. Fifteen of these families sailed recently from Glasgow to Canada on the Canadian Pacific liner Montcalm, and in addition there were quite a number of young fellows who were going to try their luck in the Land of Promise. The above group is a good indication of the class of sturdy energetic young men that Canada wants and which Canada is certainly getting under the auspices of the British Immigration and Colonization Association.

WORLD HAPPENINGS
BRIEFLY TOLD

Prince Christian Kraft, Hohenlohe-Oehringen, Duke of Hohenlohe, and ruled the wealthiest man in Germany, is dead.

A deadlock has been reached over duplication of the Pacific cable from Fiji to Canada, and Imperial Conference may not deal with matter.

A shipment of two hundred thousand pounds of Argentine corned beef has arrived in Vancouver for local distribution. This is the first shipment of this commodity to Vancouver.

Fifty head of livestock were cremated in a fire that destroyed a stock barn operated near MacDonald, Man., by Stewart and Cameron, Limited, of Winnipeg. The loss will run into thousands of dollars.

No official confirmation is available from governmental circles to the cable report from London that Viscount Willingdon would be Canada's next governor-general, succeeding Lord Byng of Vimy.

It is stated in Manitoba Government circles that an effort will be made to enlist the support of Ontario in the fight being waged by the three prairie provinces for "blue sky" legislation to control sales of shares.

Spain's representative informed the commission charged with studying reorganization of the League of Nations Council that unless she is accorded a permanent council seat Spain will be convinced that it is not useful to collaborate longer with the league.

Answering a question in the House of Commons, Hon. Charles Dunning, minister of railways, stated that the government had no information of any proposal by the Canadian Pacific Railway to construct a new line from Winnipeg to the Pacific coast.

The papal nuncio to Mexico, the Right Rev. George Caruana, left for Washington. Monsignor Caruana was ordered expelled from the country, allegedly for having entered Mexico in an improper manner in contravention of the clauses of the Mexican constitution dealing with foreign ministers of the gospel.

Prediction That Chicago
Will Be Submerged

Scientist Says That Earth's Move-

nents "is causing" South American

Great Lakes to Be Sinking

"Chicago is being blamed today for stealing water from the Great Lakes. A future day will see that city not only in possession of all the water it needs, but more than it wants, for it will be submerged under Lake Michigan." This was a statement made by Professor Goodwin, of Toronto, in a lecture at Fort William. He declared that facts of earth movements already known to science pointed out that the north shore of Lake Superior was gradually rising, while the south shore was sinking.

Canada was getting more land and the United States losing land in a corresponding amount, due to these earth movements. Within probably 90,000 years, the St. Lawrence waterway would be totally dried up and the waters of the Great Lakes would flow south towards the Gulf of Mexico. Vessels would pass over the present site of Chicago.

May Salvage Turco-Egyptian Fleet
In Navarino Bay, in 1827, the Turco-Egyptian fleet was sunk in a naval battle. The Greek Government has issued a proclamation inviting salvage firms to submit tenders for the raising of the remnants.

Candelilla wax, used in making candles and polishes, is obtained from a weed which grows abundantly in Northern Mexico.

A lot of men who only sit and while might have been good surgeons if properly trained.

W. N. U. 1630

A Canadian Ambassador

American Paper Thinks We Should Have a Representative in U. S.

It is years since it was arranged that Canada should have an ambassador to the United States. The Canadian Government has announced at different times that the appointment was upon the point of making. It has been asserted by friends of that government that the ambassadorship would be assigned as soon as the right Canadian could be had. Either the right Canadian is "a white blackbird" or "a shrinking violet," for there are 9,000,000 Canadians and among them there must be some man capable enough and not too modest to serve Canada at Washington.

As a matter of business alone the Dominion needs an American ambassador. Canada is too old and great, its interests too numerous and important, for the British ambassador to represent it indirectly, when Albania, Egypt and Haiti have representatives of their own in the United States. No British ambassador can handle Canada's business at Washington as advantageously to Canada as could a representative of the Ottawa government.—Chicago Journal.

The Charm of Soft Fabric

New frocks are soft and flattery with flowered materials and flares. The frock presented here is sure to take the eye of the miss and little woman. First, because of its arresting simplicity of line, and second, because of the loveliness of its material. A wide ribbon sash is tied at the low waistline, where rippling skirts join slender bodice. The bodice neck is finished with a narrow blinding of the same plain material as the flaring sleeves. No. 1254 is in sizes 16, 18 and 20 years. Size 18 years (36 bust) requires 4 1/2 yards 36-inch figured crepe, and 3/4 yard georgette crepe; ribbon for sash 2 1/2 yards 5 inches wide. Price 20 cents.

The secret of distinctive dress lies in good taste rather than a lavish expenditure of money. Every woman should want to make her own clothes, and the home dressmaker will find the designs illustrated in our new Fashion Book to be practical and simple, yet maintaining the spirit of the mode of the moment. Price of the book 10 cents the copy.

SUNDAY SCHOOL LESSON

MAY 30

JACOB AT BETHEL

Golden Text: I am with thee, and will keep thee whithersoever thou goest. Genesis 28:15.

Lesson: Genesis, Chapters 27, 28. Devotional Reading: Psalm 121.

Explanations and Comments

Jacob's Dream At Bethel, verses 10-15.—Jacob was fleeing from Esau's wrath; see The Historical Background. He left Beersheba and started toward Haran. Quite by accident, as it would seem from the expression "he lighted upon a certain place," he came to the hillside near Bethel, where he had vision of God.

"God pity the boy who leaves home and does not carry with him some kind of pointing finger that shows the way to God, some memories, some imaginations that lead him to the place where God may be seen" (Ralph Connor).

Jacob needed something for a pillow and there was nothing better at hand than the stones about him. He took one of them and put it under his head as he lay down to sleep. Such a practice is common in Africa at the present time. When Bishop Taylor returned to this country he had no use for soft pillows, and more than once substituted a headrest of books.

The sun hung low in the sky as Jacob approached Bethel, and the last thing before falling asleep, he had gazed upon the rocks and stones so suddenly strewn about him, and in his dream they naturally shaped themselves into a ladder, or flight of stone steps. (In Hebrew and also in Arabic the word here translated "ladder" means also "staircase").

"The Spirit of God always conveyed his teaching to his servants in language borrowed from their surroundings. John's records of heaven are full of reminiscences of the Aegean, which sometimes murmured around the cliffs of his prison like a sea of glass bathed in fire, and at other times broke on them in yeasty foam. David's Psalms make constant reference to the wild hill-country or Judea, in which so many of them were composed" (Dr. B. F. Meyer).

Largest Nursery Business

Largest Nursery Business in Western Canada Carried On At Estevan

What is claimed to be the largest nursery business in Western Canada has been developed at Estevan by a settler who came to Canada from Valley City, North Dakota, 15 years ago and commenced on the bare prairie. His nurseries now cover over 700 acres of land and, in addition to supplying Saskatchewan demands, nursery stock is shipped in carload quantities to the United States. The success of this enterprise is attributed in part to good management and also largely to the demand of successful western farmers for fruit and shade trees with which to beautify and improve their prairie farms. Known as the Prairie Nurseries, this firm has recently shipped a carload of evergreens to the United States, and as far as is known this is the first time that conifers have been exported from Western Canada.

Handshaking Is Hard Work

Prince of Wales Not Only One to be Incapacitated by Custom
The decision to abandon the White House custom of indiscriminate handshaking was bound to be made sooner or later, for it had become a menace to the health of both the president and his wife. At the first reception after the war President Harding shook 6,500 hands at the rate of 30 per minute. President Wilson wished he could get a glove with steel fingers. The wife of President Cleveland found her right hand getting larger than her left as the result of much democratic salutation, and took violin lessons to reduce the disability. Mrs. Harrison, after the first experience, evaded the ordeal by holding a fan in one hand and a bouquet in the other. We remember how the Prince of Wales was similarly incapacitated during his visit to Canada by the too hearty grip of welcome.—London Daily Chronicle.

Handshaking Is Hard Work

Incidentally, the decision to abandon the White House custom of indiscriminate handshaking was bound to be made sooner or later, for it had become a menace to the health of both the president and his wife. At the first reception after the war President Harding shook 6,500 hands at the rate of 30 per minute. President Wilson wished he could get a glove with steel fingers. The wife of President Cleveland found her right hand getting larger than her left as the result of much democratic salutation, and took violin lessons to reduce the disability. Mrs. Harrison, after the first experience, evaded the ordeal by holding a fan in one hand and a bouquet in the other. We remember how the Prince of Wales was similarly incapacitated during his visit to Canada by the too hearty grip of welcome.—London Daily Chronicle.

Happiness comes to you as a result of earning it, not as a result of willing it.
A gallon of sea water contains approximately a quarter pound of salt.

Planning Moslem

League of Nations

Over One Hundred Delegates to Attend Conference in Cairo

A Moslem league of nations, rivaling its counterpart at Geneva in potential importance, may be the outcome of a world conference of Moslems to be held at Cairo.

A hundred and fifty delegates, representing 200,000,000 Moslems will try to restore the unity of the Mohammedan world, shattered when Turkey overthrew its sultan for hundreds of years, also the empire of Islam, and declared itself a republic under the presidency of Mustafa Kemal.

There are many candidates for the caliphate.

It is unlikely that sufficient unity will be maintained to permit of the election of a universal caliph.

Because of this disunity, the conference will discuss the formation of a permanent committee, representing all Moslem countries and headed by a chairman, who would be titular caliph, to constitute a league of Moslem nations.

A Last Kick

The Agitator Now Receives No Sympathy in Ireland

A man with an Irish name and claiming New York as his place of residence is under arrest in the Irish Free State on the very serious charge of being involved in a plot against the government.

It might have been thought that when the people of the Irish Free State undertook the task of governing themselves the activities of the Irish-American agitators would cease; but it is difficult to give up old habits. Agitators who have prospered by making war on John Bull in Ireland are reluctant to see their occupation go with the going of John Bull from Ireland; they regard it as a new grievance that their old one has been taken from them; but the chief significance of the arrest of Patrick Garland may be a reminder of conditions as they used to be. The Ireland of today has apparently no more use for Irish-American agitation than John Bull had.—St. Catharines Standard.

Aeroplanes At High Altitudes

Airmen Will Be Able To Fight At Great Heights

There is little doubt that in the next air war airmen will fight, invisible from the earth, at heights between 20,000 and 30,000 feet.

An ordinary engine develops but a fraction of its power at such altitudes, owing to the rarefaction of the air. Actual tests, however, made in conditions artificially reproduced to represent the state of the air at a height of ten miles with new super-charging devices that have been perfected, show that a 2,450-horsepower engine can be made to develop its full speed.

No human being could breathe at such a height, without artificial air, and the aeroplane into which these engines are to be built will carry oxygen apparatus and will probably be airtight. The crew, being totally enclosed, will produce their own atmosphere, as is done in submarines.

France Exports Briar Root

Briar roots, used for making smoking pipes of a popular variety, is so much in demand in America that it is necessary to import huge shipments from France to take care of the demand. As a result France in one year shipped briar root valued at \$8,000,000 francs to America.

Population of British Columbia

British Columbia's population has shown considerable increase since the census of 1921, according to figures compiled by government officials on the basis of school population. The total population of the province, set at 524,000 in 1921, is now nearly 600,000, these figures show.

Some men are so sympathetic that they will even share your last dollar with you.

OUR CROSSWORD PUZZLE

Horizontal

- 1—The highest point.
- 5—Slimy slow creeping mollusks.
- 10—A grab.
- 11—Diversions.
- 12—Metal.
- 13—To prohibit.
- 14—To betray.
- 17—Poise.
- 18—One who conducts a vessel in or out of a harbor.
- 20—Provoked.
- 21—Toward.
- 22—Characteristic.
- 24—Accomplish.
- 25—Strips of leather.
- 27—Relish; taste.
- 29—A food.
- 30—Thought.
- 33—Past of blow.
- 35—Slumbers.
- 37—Near.

Vertical

- 39—Stumbled.
- 41—Article.
- 42—To tear.
- 44—Part of stand.
- 45—Plural of to be.
- 46—Behind.
- 48—Vehement.
- 49—To crush with the mouth.
- 50—A desert animal.
- 52—Owned.
- 53—A written message.
- 54—Badges.

- 13—Parts of plants.
- 14—Prejudice.
- 16—A young boy.
- 18—Hot spices.
- 19—Followed.
- 22—Negligence.
- 23—Finished.
- 26—To loot.
- 28—To turn to the right.
- 31—Separately.
- 32—Ker.
- 34—To dry up.
- 35—Dol.
- 36—Expressions of contempt.
- 38—To bind.
- 40—A small body of water.
- 43—A contract.
- 45—The name of a popular opera.
- 47—A rodent.
- 49—Wicked.
- 51—Myself.
- 52—That Man.

Boy Without Hands
Overcomes Obstacles

Can Write Plainly and Took Prize For Wood Carving

Greeting the loss of both his hands as a "challenge" instead of a misfortune, 14-year-old Vincent De Blasio is the proud possessor of the Philadelphia boy award, given annually to the boy who has shown the greatest earnestness and courage in overcoming obstacles.

Vincent lost his hands four years ago while dangling over a railroad

Six Platforms Acts Broken For West

bridge a wet rope attached to a stick that came in contact with a heavily charged electric wire. He hands were so badly burned that they had to be amputated above the wrists.

Young De Blasio's achievements were known to his teachers, but were not generally known until he submitted to the Boy Hobby Fair, a feature of boy week, a sturdy little taboret which he had carved out of wood. Investigation revealed that he could write plainly, holding a pen between the stumps of his arms; he could work with tools in wood carving, and he spent his spare time as a clerk and messenger boy.

Vincent is the youngest of the nine children of Mr. and Mrs. Pasquale De Blasio. His ambition is to become a lawyer, and his friends and teachers believe this ambition will be realized.

Women Moneylenders
Ask Heavy Interest

Client In Liverpool Paid Forty-two Pounds For Five

In a court case figures were revealed showing that of 1,400 registered moneylenders in Liverpool about 1,100 of them were women. In one instance a woman client had paid 42 pounds in respect of a loan of five pounds, and then was sued for two pounds additional. The moneylender lost the case.

A man is seldom disappointed in love until after marriage.

A perambulator is one kind of a good thing that few men care to push.

Answer to Last Week's Puzzle

Britain Best Bell Caster

Lost Art Was Rediscovered and Improved On

That Britain probably still leads the world in the art of bell-founding may be inferred from the news that the contract for the 15-ton bell for the 400-foot high Wanamaker store in Philadelphia has gone to the old-established firm of Gillett & Johnston, of Croydon.

Cyril Johnston, who has just returned from the United States, says that the art of bell casting and tuning was learned from Holland three centuries ago, then lost, and since rediscovered and improved upon by the British bell founder. The new bell is to be cast and tuned on this new system, which is known as the five-tone Simpson harmonic. This method insures that the bell will be in tune with itself, that it has at least five tones at correct intervals, so as to form a perfect musical chord.

Probe Coal Supply

J. E. Armstrong, Conservative, Lambton East, was chosen as chairman of the special committee of the house appointed to investigate Canada's present sources of anthracite and bituminous coal and other matters in relation thereto at the first meeting of the committee. A. U. G. Bury, Conservative, Edmonton East, was named as vice-chairman.

Funny how derisive the fireman or engineer can make the whistle sound while passing a truck that's mired down.

TIPPITY-WITCH IRENE

IN THE ZOO

By COLLEEN MOORE

Number Of Automobile Parts Are To Be Placed On The Free List

Ottawa.—Hon. J. A. Robb, minister of finance, announced in the House of Commons modifications in the automobile tariff. The reduced duties on imported cars, announced in the budget, remain, but a number of automobile parts are to be placed on the free list. The following parts, all of a class or kind not made in Canada, said Mr. Robb, would be admitted free for use as original equipment in the manufacture of automobiles.

Horns, distributors, ammeters, instrument board lamps, oil gauges, gasolene gauges, thermostats, oil filters, carburetors, purifiers for oil, purifiers for air, clocks, monograms of metal and enamel, annular ball bearings and parts thereof, lock washers, speedometers and parts thereof, vacuum wheels, welded axle housings, electric terminals, other than battery terminals and fuses.

Mr. Robb proposed that the above be added to the free list as an amendment to the budget resolutions.

Investigating Soviets' Remarks About Strike

Alleged Statements Inconsistent With Officially Friendly Relations

London.—The British foreign office is considering whether it shall make representations to Soviet Russia in connection with statements reported to have been made by Soviet officials in support of the recent general strike in Great Britain.

The attitude of the foreign office is that the alleged statements are inconsistent with the friendly relations which officially exist between the two governments.

Sir Austen Chamberlain, foreign minister, answering a question in the House of Commons, said he was awaiting further information before deciding what, if any, steps should be taken.

Storms Have Ruined French Fruit Crop

Unless Weather Improves Soon Cereals Are Also Threatened

Paris.—Fruit crops all over France have been ruined by snow, rain, hail and gales, while cereals are threatened, if the improvement promised by the weather forecaster does not materialize quickly.

Many valleys which suffered badly at the beginning of the year from floods again are menaced by rising waters, notably the Upper Marne, the Rhone and the Durance.

Prison Sentence For Spies

Three Englishmen Found Guilty By French Criminal Court

Paris.—The three Englishmen who were arrested here last December on charges of espionage, have been given prison sentences in Criminal Court. The court found they had endeavored to obtain secret documents concerning French maritime and aviation stations.

At the time of their arrest it was charged that the three men were former British officers in the intelligence service of Great Britain. The British foreign office, however, denied all knowledge of the men's activity.

Win For Government As House Divides On C.N. Estimates Motion

Ottawa.—A division on a motion for appointment of a special committee of the house to consider railway estimates gave the government a majority of 15. The division stood as follows: For, 107; against, 92.

Majority, 15. As in the budget divisions, Progressives, Independent and Labor members voted with the government. Two Conservative members contributed to the government majority, R. S. White (Mount Royal) and W. F. McLean (South York). Premier King did not vote. Right Hon. Arthur Meighen was absent from the division through illness. Premier King announced subsequently that, although he had not been paired for today's division, he had refrained from voting as continued illness was obviously the cause of Mr. Meighen's absence.

The division came on a motion by Hon. C. A. Dunning, minister of rail-

French Bombard Damascus

Retaliated For Attack On Outpost and Hundreds of Civilians Killed

London.—A dispatch to the Daily Express from Damascus dated May 9, says:

"The city has undergone another bombardment by artillery and aeroplanes. More than 500 civilians, including women and children, and about 100 rebels and 20 French were killed. Three hundred houses were destroyed."

The dispatch says the bombardment reported May 11, when it was announced that 50 rebels had been killed, but that the real extent of the damage done or the casualties were not made known.

According to the correspondent's account of the affair the rebels attacked some French posts, killing eight soldiers and capturing 20. Two hundred rebels then retired into Osdan—a southern quarter of the city of Damascus—and barricaded themselves in houses.

Early the next morning 3,000 French soldiers surrounded the quarter, which contains 80,000 inhabitants, and summoned the people to deliver up the rebels, declaring that otherwise they would be bombarded.

The reply of the inhabitants was that they were unarmed and were unable to coerce the rebels. They invited the French to enter and capture them.

"Such an attempt," the correspondent continues, "would have involved a serious sacrifice in lives of the soldiers. Accordingly the inhabitants were given an hour to quit the quarter and go to a defined safety area."

"Only a few succeeded in leaving in time. The French then began bombarding the quarter with 12 three-inch guns, four howitzers and a dozen aeroplanes."

"The shelling lasted unceasingly for 15 hours."

"Fire broke out immediately. The sky was darkened by smoke and dust. General panic followed. The male inhabitants joined the rebels in attacking the French."

"Women and children rushed aimlessly through the streets, falling victims to bursting shells or collapsing houses."

Cost Of Strike

Great Britain's Strike Bill Totals Over \$282,500,000

London.—Great Britain's strike bill is gradually being tabulated. Walter Runciman, in the House of Commons, estimated the total direct loss of trade at £26,500,000, and indirect loss to the country's industries at more than £30,000,000.

"Add that isn't the whole tale," he said.

Four railway companies roughly estimate their losses at more than £5,000,000, while the national union of railwaymen figure the strike cost to them at more than £1,000,000.

The unemployment statistics of May 10, made public, showed an increase among the workless of 470,000 over the week previously. This was due to workers being thrown out of jobs owing to the strike. The total unemployed numbered 1,576,000. These figures do not include the idle miners.

Awaiting Boat To South

Members of Amundsen Expedition Housed in Cabin at Nome

Nome.—Four Arctic explorers settled down to routine life in a cabin here and continued to exchange reminiscences of their experience in flying over the top of the world.

Awaiting the arrival of a steamer the party, headed by Raoul Amundsen, discoverer of the South Pole and the third to reach the North Pole, are content to rest. There were indications of a long stay, as the next boat out of Nome will be on June 15.

The dirigible Norge, the huge gas bag in which the explorers made their way through clouds, fog banks and Arctic temperatures from Spitzbergen to Teller, 75 miles from here, is being carefully packed for shipment out of Alaska by steamer when the ice-locked harbor thaws out.

Captain Amundsen, Lincoln Ellsworth of New York, and Captain Oscar Wisting and Lieut. Oskar Omdahl, all members of the expedition, are occupying a cabin which they have christened the Explorers' Club. Here they plan to hold forth until a steamer is sighted.

Complete Design Of Largest Dirigible

U. S. Government Will Construct Two For Military Purposes

Cleveland.—Completion of the design of the largest dirigible ever attempted was announced in address here by Karl Arnstein, chief engineer of the Goodyear Zeppelin Corporation plant at Akron.

The ship will have a capacity of 6,000,000 cubic feet, compared with the 3,500,000 of the Los Angeles.

It will be 500 feet long, 135 feet in diameter, will contain state rooms and accommodations for carrying 100 passengers and have a cruising radius of 5,000 to 8,000 miles at 90 miles an hour.

Dr. Arnstein said the House of Representatives had approved construction of two dirigibles of this type for military purposes.

Germany Changes Loan Market

U. S. Has Been Superseded By Britain and Holland

Berlin.—The United States, which has long been about the only money lender available to Germany, has been superseded by Great Britain and Holland, says a report by the Deutsche Gesellschaft, one of the large Berlin banks. The report shows that Germany, since January 1, raised loans aggregating 2,650,000,000 marks (\$730,965,000), of which 1,980,000,000 marks were raised abroad and 670,000,000 at home.

Increased Mineral Production

Victoria.—Value of mineral production in British Columbia in 1925 made a new high mark when the output totalled \$61,922,242, as against \$48,701,604 in 1924, an increase of 26.2 per cent. The revised figures were made public by the department of mines.

India's Only Woman Ruler Abdicates Throne

British Government Granted Request For Only Son To Succeed Her

London.—India's only woman ruler, Her Highness the Begum of Bhopal, has abdicated her throne in favor of her son, Nawab Zada Hamidulla. For a long time she had contended for the throne: right to name her successor, who under ordinary procedure should have been the son of her deceased eldest son, Nawab Nasrulla Khan. The British Government finally acceded to her desires.

The abdication of the Begum brings to an end a period of 80 years of female rule in the little state of Central India of 6,992 square miles, with a population of about 700,000. She had ruled Bhopal for a quarter of a century with vigor and statesmanship. Although now 68 years old, she still is mentally and physically vigorous. Nevertheless, she long had wished to see her only son established as her successor before her faculties failed her.

Nawab Zada Hamidulla is now 31 years old. He had been carefully trained in statesmanship under his mother's direction. He was on the staff of the Prince of Wales during the Prince's visit to India and also served in the war. He has a splendid reputation.

Having succeeded in her efforts, it is said she retires happily from the cares of the government.

Accepts Aid From Soviets

Money Refused By Trades' Unions Goes to British Miners

Moscow.—The Soviet news agency announces that A. J. Cook, secretary of the British Miners' Federation, "has accepted with deepest thanks" the money given by the Soviet miners to aid the strikers in the British Isles.

The news agency adds that Mr. Cook has requested that the money be transferred immediately to England "as the miners' need is very great."

Previous dispatches from Russia announced that the sum collected for the British miners in Soviet Russia amounted to about \$1,000,000. The money was offered to the British Trades Union Congress during the recent general strike, but was declined.

Ban On Fortune Telling

Pastime Will Be Prohibited In Vancouver In Future

Vancouver.—While palmistry, phrenology and astrology are recognized as sciences under the Canadian criminal code, and persons practicing them are eligible to receive civic licenses, fortune telling by "readings" and cards is illegal, and will be banned in Vancouver hereafter, states Chas. Jones, city license inspector.

The practice of giving free readings of the future in Vancouver tea shops and beauty parlors has lately achieved great popularity, said Mr. Jones, and persons permitting it to continue will be liable to cancellation of their business licenses and to police action under the criminal code.

Chips of the Old Block for Canada

Here are a few examples of the class of settler that is being brought over to Canada by the Canadian Pacific Railway. Of the best British stock they look the part and a finer crowd of children and young people could not be found anywhere in the world. Careful then at this age and they are complete Canadians in a few years. Take first the Nicol family from Wicheol, Scotland, who are settling at Edmon-

ton, father and mother, two girls and four boys. Then there is the Shirls family from Birmingham, England also two boys and girls, bound for Saskatoon. Finally there are Annie, Jeffrey and Mary, the children of F. Heald, of Fleetwood, Lancashire, also bound for Saskatoon. These are the type of immigrant that Canada is hungry for and is always glad to have. Above are shown the Nicol family. Oval—Annie, Jeffrey and Mary.

Strong Opposition Is Shown Towards Bill To Amend The Grain Act

Will Explore Ungava Territory

Expedition Will Make the Trip In Three Aeroplanes

Quebec.—What is considered the most important expedition that has ever been sent out by the Provincial Government will leave Seven Islands in June next by aeroplane, for a long exploration trip in the vast territory of Ungava. The expedition will be under the direction of Henri Belanger, well known surveyor, who has several similar undertakings to his credit already, and will comprise about fifty men and be divided into three parties, with Mr. Belanger, Paul Savaria and Arlen Chaffour as the respective leaders.

The whole exploration will be accomplished in three aeroplanes. The principal aims of the expedition are the preparation of a detailed report on McLean's Fall, considered the largest falls in Canada, 800 feet in height and three-quarters of a mile wide. More than 1,000 miles will be covered by the explorers during the four months they expect to be absent.

Oppose Suggestion For Canadian Standard

Management of Historical Association Would Keep Union Jack

Ottawa.—The management committee of the Canadian Historical Association, in its report presented at the annual meeting of the association here, expressed "its strong disapproval of any attempt to substitute another flag for the Union Jack as the Canadian standard."

A motion to this effect was passed last fall by the British Columbia Historical Association and copies of it were sent to all other provincial historical associations.

The report of the management committee states that "so far as replies have been received, the consensus of opinion appears to be in sympathy with that of the British Columbia Historical Association."

The report adds that it does not think it advisable to take any further action.

Gold Deposits Found Near Arctic Circle

Ore Bodies Were Discovered By Electrical Prospecting Methods

Stockholm.—New gold deposits, classed as fourth in the entire world, have been discovered by electrical prospecting methods developed by Hans Lundberg and Karl Sundberg, mining engineers, at Hollebo in the province of Vesterbotten, not far south of the Arctic Circle.

Altogether 34 ore bodies have been located in this region, all covered by glacial drift, swamps or lakes.

One deposit was traced through the ice at the bottom of a lake 30 feet down.

Besides gold these ore bodies have been found to contain copper, silver, arsenic, sulphur and pyrites.

Crop Prospects Are Reported By Government To Be Very Satisfactory

Ottawa.—Crop prospects in general are exceedingly good, although the season is a little late in some parts of Eastern Canada, says Hon. W. R. Motherwell, minister of agriculture, in a statement on the crop situation.

Advices from the Maritime Provinces indicate that the season is from ten days to three weeks late, which means that very little seedling has yet been done," continues the statement.

In Quebec also the season is late and but little seedling has yet been done in the western and southern parts of the province, and none in the eastern and northern areas.

In Eastern Ontario seedling is well under way, but the season is quite two weeks late, while in Western Ontario seedling was finished only a week ago, much later than usual.

Wheat seedling has been completed in Manitoba and good progress is being made with coarse grain. Grain

Ottawa.—The agricultural committee has fixed June 1 for the hearing of the bill of Milton Campbell, M.P. for MacKenzie, which would amend the Grain Act so as to give the producer of grain the right to determine the destination of his product. The bill seeks to restore a right conceded in the act as drafted by Mr. Justice Thurgood but taken away in the parliamentary process.

An impressive lobby from the Grain Exchange is here and more are coming and they talk of smothering the bill in the committee. Isaac Pittblado, K.C., Dr. Magill, secretary of the Grain Exchange; John T. Haig, K.C., D. C. McLaughlin, Charles Gage and R. T. Evans, of Winnipeg, are opposing the bill, ably assisted by other counsel. In their memorandum they are stressing the claim that the act of 1925 took away no rights the shipper previously had. They maintain that when the grain commission suggested the clause they never intended that the shipper should designate the terminal point to which his grain is to go. Then they are alleging that \$85,000,000 of invested capital for handling grain is imperilled and that, while private ownership is compelled to compete on even terms with the pool system, the proposed legislation "destroys fair competition."

The lobby is very vigorous in opposition to the bill. There are 115 members on the committee, some 55 of them Liberals, 47 Conservatives and the rest Progressives. The factor of political influence is not overlooked and no political stripe is being overlooked by sympathetic friends retained for the fight.

Farmer Bodies Are Planning Amalgamation

S.G.G.A. and F.U. Will Decide at Convention in July

Saskatoon.—The joint convention of Saskatchewan Grain Growers' Association and Farmers' Union of Canada, at which the proposed amalgamation of the two organizations into the new United Farmers of Western Canada.

Saskatchewan section, will be finally decided, for or against, has been commenced to be held in Saskatoon, July 15. Mrs. Violet McNaughton, of Harebell, secretary of the amalgamation committee of the two organizations, announced at the end of a meeting of the committee here. The recommendation will go to the executives of the two organizations to be ratified.

It is anticipated that about two thousand delegates will be present. The S.G.G.A. and F.U. of C. will convene separately first, and then will convene as one body.

Meighen to Speak in Winnipeg

Ottawa.—Right Hon. Arthur Meighen will be the guest of honor at the convention of the Manitoba Conservative Association, to be held in Winnipeg, June 8. Mr. Meighen will be one of the chief speakers.

Neighborhood in Balkans

Paris.—General Paraskevopoulos, the new Greek premier, wishes to practice a policy of neighborhood in the Balkans, particularly with Yugoslavia, he told the French press.

There Is A Canadian Race

People Born in This Country of Mixed Parentage Entitled to be Classified As Canadians

We have yet to hear any sensible reason advanced why a native Canadian of mixed ancestry, should be forbidden to answer "Canadian" when he is asked this question by a census enumerator: "Of what racial or tribal origin are you?"

The present system by which Canadians of the second, third, fourth, fifth and sixth generations have to grope back through the family tree to their original paternal ancestor from Europe in order that they may answer "Scotch," "English," "French," "Swedish," "German," and so forth, is defended by the census authorities upon the ground that "the object of this question" (as to racial origin) "is to ascertain from what basic ethnic stocks the present Canadian population, more particularly the recently immigrated population, is derived."

The effective reply is that under the existing system this information is not obtained. Anything more absurdly unscientific than this method of identifying the "basic ethnic stocks" of the Canadian population could not be devised. Every person, within the scope of his own knowledge, can elicit after case where the census method of identifying ethnic origins is farcical beyond words. Take the case of a family three of whose four grandparents came from England, France and Germany, the fourth being a Canadian. To what "race" do they belong according to the highly scientific methods by which our census slouts detect racial origin? They are, if you please, Germans.

An attempt is made to break the force of criticisms of this character by pointing out that the census does recognize "Canadian nationality." But "nationality," in official terminology, means only "citizenship." The word "nationality" has many meanings, but the one which is in the minds of most people when they use it is that which is defined by the dictionary as "the people constituting a particular nation; a nation; a race of people." Canadian nationality in this sense is not recognized by the census regulations; instead it is expressly denied. There is no room in our records for the word "Canadian" as representing race. They register scores of other "races"; but the Canadian race is non-existent.

Within the meaning of the word "Canadian" as used in the census, there have been on this continent we are still Swedes, or Dutchmen, or Irish, or Scotch, or Welsh, or English.

Now, in contradiction to all this we maintain that there is a race of Canadians. The evidence that there is such a people is to be seen of all men in the form of hundreds of thousands of men, women and children, who, as must be plain to all who have eyes to see and ears to hear, are not English, not Scotch, not Irish, not continental European. They are Canadians and nothing else, living in a land which disowns them. It is time that they should serve notice on the government of this country that they do not propose to put up longer with this particular insult which they have to stomach every time they entertain a census enumerator or fill out a vital statistics form.

The issue is perfectly simple. It is that people born in this country of mixed parentage are entitled to be enrolled in the citizenship records of this country as belonging to the Canadian race. Free Press.

Work Nights If Necessary

Insects Never Leave Urgent Piece of Work Undone

An ant that ran amok in the London Zoo insect house and some bees that worked on night shifts to get their job done have been observed by Miss L. E. Cheesman, formerly curator of that department.

A colony of stingless bees, she relates, were never known to emerge if the temperature was below 72 degrees Fahr., and no worker was visible after sundown; but on one occasion when the workers were engaged in building the entrance to the nest they worked on it all day and far into the night at a temperature of 65 degrees.

It is not unusual for the social insects to work on night shifts when there is an urgent piece of work to be done.

Irrigation Convention

The Western Canada irrigation convention will be held this year at Medicine Hat on July 27, 28 and 29. The feature of the convention will be an address by L. D. O'Donnell, of Billings, Montana, who is a specialist on the growing of sugar beets in irrigated districts. On this account this meeting should be particularly interesting.

W. N. T. 1620

Chinese Were First To Use Wallpaper

Put Up Strip Every Time Death of Relative Occurred

Chinese families at one time commemorated the deaths of their relatives by putting up a strip of wallpaper every time a death occurred. This extraordinary method of paying tribute to the dead is revealed in the "History of English Wallpaper," by Mr. A. V. Sugden and Mr. J. L. Edmondson.

China was the first nation to make use of wallpaper. Traces have been discovered of wallpapers being used for ritual purposes 2,000 years ago. Skins of animals were the forerunner of the existing wallpaper in England, and were later succeeded by tapestries and painted cloths.

Wallpaper discovered some years ago at Christ's College, Cambridge, is now believed to be the first specimen of genuine wallpaper made in England. Its date was apparently 1509, for on the other side of the paper appeared a poem concerning the death of Henry VIII. and a proclamation of Henry VIII.

The paper was found on some old beams, and was carefully collected by the order of Sir Arthur Shipley, Master of Christ's College, Cambridge.

Producers and Consumers

Goods Made Are Those People Can Afford to Buy

People sometimes wonder why more fine work is not produced. The tendency is to place the blame on the producers. Yet it does not belong there. There are few producers who would not like to make finer products, and there are few consumers who would not like to buy finer products.

The producers make what the consumers can afford to buy. Most producers take part of their profits from the production of ugly necessities and use them to pay the losses involved in the production of beautiful luxuries. There is no lack of consumers who want fine things, but there is a lack of consumers who can afford fine things. They want many fine things, but can buy only a few.

The general standard of excellence should advance a few notches each year. We might move forward faster if we would learn to get satisfaction from the ownership of a few fine things rather than many mediocre. By William Feather.

The Fish-Gods Of Hawaii

Queer Superstition Held By Fisherman Also Prevailed Among Polynesians

On the Mokapu flats near Honolulu is the abode of the Fish-Gods. Here are the Pyramid Rocks of black lava, and the Fish-Gods are blocks of black lava, standing upright upon a rock platform.

The Fish-Gods are called "Au-Maka," and the chief Fish-God is "Kaua." He was worshipped at an altar, or "ko-a," offerings and sacrifices were brought to him for abundant catches. Al-ni, the son of Kaua, was the one who first revealed the location of the deep-sea fishing grounds to the fishermen. Undoubtedly the same beliefs prevailed among the Polynesians, as is seen even today in the Dance of the Waves in Fiji, which is the survival of an ancient ceremonial dance of the fishermen, held at times of festivals and sacrifices to the Fish-Gods.

This Old World

"Is the world round?" a school ma'am asked the little boy. "No'm." "It isn't, eh? Is it flat, then?" "No'm." "Are you crazy, child? If the world isn't round and isn't flat, what is it?" "Pop says it's crooked."—Pittsburgh Telegraph.

Everything Just Lovely

Burglar:—"Are the people of the house in?" Servant:—"No, they're all out." Burglar:—"Have you paid your dog license?" Servant:—"We haven't any dog." Burglar:—"Well, then, I've come to tune the piano."—Passing Show, London.

Alberta National Parks

It is estimated that 150,000 people visited the National Parks of Alberta during the past year. Assuming that only half of these were from outside of the province and that each spent only \$200 during his stay, the money brought into the province by such traffic would be \$15,000,000.

A man may be handicapped by being born a poet, but there is no reason why he shouldn't brace up and make something of himself.

Man is funny. He smokes for the effect on himself, not for the effect on spectators.

Everlasting Flowers

Can Be Easily Grown and Preserved For Use in Winter Months

Many of our homes are much bare of flowers that they need be during the winter months. With a little forethought and a bit of ground one can have bloom during the whole twelve months. Until one has learned to grow one's own fresh flowers from bulbs planted in the autumn, bright bouquets can be had by the use of everlasting flowers sometimes termed "strawflowers," of which there are many varieties.

In a new bulletin on "Annual Flowers," recently issued by the horticultural division of the experimental farm at Ottawa, the Helichrysum bracteatum in its many varieties is said to be the best of all everlasting flowers. They are described by Miss Isabella Preston, the author of the bulletin, as rather coarse looking plants in the garden, growing about three feet in height. They are grown from seed like other annuals and cultivated similarly during the summer months. For winter bouquets Miss Preston recommends cutting the flowers when half open, tying them up in small bunches which are hung head downwards in a dry place. The large flowering types are said to be the best, these including in colors white, yellow, pale pink, bright red and deep maroon.

More dainty kinds of everlasting flowers are found in varieties of Heliotropium Manglesi. These come in both single and double form and in different shades.

Miss Preston's treatise on annual flowers, available at the publications branch of the department of agriculture, is based on experiments of many years at the experimental farm with annual flowers of all descriptions which are described both as to the flowers themselves, the purpose for which they may be used and their cultivation.

Does Advertising Pay?

Man Proved To His Own Satisfaction That It Does

A man wishing to sell his private house, placed the particulars with a local real estate dealer. He was tired of living in the same house for five years and so was looking for something new.

An advertisement appeared in the real estate column of a newspaper which very much appealed to him, instead of the owner's name being printed, a box number was substituted. The man immediately wrote for further details.

The next day he received a letter from the real estate man with whom he had placed the particulars of his own house, and was surprised to learn that he had answered his own want. The reading matter of the ad impressed him so that he decided not to sell his house.

Talk isn't cheap when you have to hire a lawyer to do it for you.

Alfalfa's Place In Rotation

Alfalfa Sod Freer From Weeds Than Summerfallow Land

Alfalfa is not well adapted to short rotations owing to the high price of seed and the value of an established field that is likely to remain productive for many years. In a ten-year rotation featuring alfalfa at the third year, exactly one-half of the land was required for alfalfa, and the sod was broken at the end of the fourth cropping year. Such a rotation, says Mr. Sigfusson in his bulletin on "Alfalfa in Manitoba," published by the department of agriculture at Ottawa, is well adapted to dairy farming or where much livestock is kept.

Alfalfa seems to thrive on soils varying from heavy clays to coarser-grained sandy soils, provided there is natural drainage, but does best on rich loamy soils, with a permeable subsoil well supplied with moisture. It can be successfully and economically included in a rotation of medium duration by having one more field than there are years in the rotation, states Mr. Sigfusson. In this case he says the alfalfa should be seeded down in the most favorable part of the rotation, preferably with a light nurse crop of wheat and an summerfallow land or following an intertilled crop. The field would then remain in alfalfa until the other crops had completed one cycle of the rotation and a stand established on another field.

The alfalfa, adds Mr. Sigfusson, can most profitably be followed in the rotation by some crop that is a heavy feeder on soil nitrogen and requires clean land. Alfalfa sod is usually freer from weeds than summerfallow land, hence is well adapted to growing wheat.

Disking an alfalfa field in the early spring after cropping for two years is beneficial and will invigorate the crop by destroying weeds and aerating the soil. If the disk barrow is not set at too great an angle the crop will not be damaged.

Crime Is England Comparatively Slight

British Enforcement of Laws Is Best In World

Today England's enforcement of criminal laws is the best in the world and compared with the United States there is little crime there. In one London police division only two murders were committed in 1922. In the same division with more than 7,000,000 population, while New York had 260 and Chicago 137. In 1922 and 1923 England had no unsolved murder.

Air Station For Edmonton

Interests in Detroit, believed to be associated with the Ford ventures, have opened negotiations for establishment of an air field and dome at Edmonton in anticipation of a national air route in the future.

"Worthy Of Emulation"

A Jack Miner League With A Jack Miner Creed

Essex County seems determined to set a fast pace for nature lovers, says the Toronto Globe. In organizing a Jack Miner League with a Jack Miner creed, it is committed to a programme which should quicken the heart of the whole country. If it would sit back long enough to consider what it means. Only a little of it is the control of the crowd and other predatory birds and animals. It goes so far as to encourage country life with all that it involves; a home among the trees, the birds and the flowers, especially for the children, who should be taught to love the outdoors by more wild-nature studies in the schools. It opposes the commercialization of game, stands for forest preservation, the maintenance of waste lands and other natural environment for wild life, protection of streams, development of fisheries, culture of flowers and other plant life, a bird sanctuary in every county, and, in general, a complete campaign in behalf of nature.

This is something new and comprehensive in nature lovers' clubs. It is an idea big enough to interest a large proportion of the people in the province, worthy of emulation in every county. It combines the aesthetic with the utilitarian, and offers a practical outlet for a variety of tastes. The authority which a large number of such clubs could exercise in behalf of nature study and protective measures would be great. Its educational effect might be more far-reaching in the back-to-the-land urge than any amount of academic culture.

There is a chance for kindred spirits throughout Ontario to enjoy the great outdoors in a common cause and at the same time perpetuate a worthy name.

Altitude Makes A Difference

Water Boils Quicker At Sea Level Than In Mountains

When ordering three-minute boiled eggs aboard a diner while in the Rocky Mountains inform the waiter where your home is and then do not become impatient if five minutes pass before he places your "three-minute eggs" before you. Paul Reiss, a railway chef, explains that five minutes is required in many sections of the west to cook food which at sea level requires only two or three minutes to prepare properly. "Down in San Francisco, the boiling point is 212 degrees because San Francisco is practically at sea level," he says. "Up in the American Magazine, 'But up where the atmosphere is lighter the boiling point is only about 199 degrees! So you can see it takes longer to boil a three-minute egg at high altitudes than it does at sea level."

Thousands of envelopes are posted every year without any address on them. No place in the British Isles is more than 80 miles from the sea.

Scenic Wonders In The West

Alexandra and Louise Falls in Northwest Territories Are of Great Beauty

Hidden within the recesses of Canada's north country, less than fifty miles from the important trading post and mission station of Hay River on Great Slave Lake, but sufficiently off the regular routes of travel to have been visited by only a mere handful of white men, are two of the most wonderful waterfalls in the Dominion. These are the Alexandra Falls and the Louise Falls, situated within about a mile of each other on the Hay River. During the course of surveys carried on last summer along the Hay River for the department of the interior, a topographical survey party spent several days in the immediate vicinity of the falls. The members of the party were greatly impressed by the scene, and the surveyor in charge reports that it is scarcely possible to use language too extravagant in describing the majesty of the setting of Alexandra Falls or the sheer beauty of Louise Falls. In the case of the former the river comes around a bend half a mile above Alexandra falls, racing in a tumult of swift water and foam, to pour over a sheer precipice 100 feet high into a shadowy chasm with a thundering force that makes the earth quiver. Clouds of spray rise to the canyon's rim, where the sun adds to the glory of the whole by forming rainbows in the mist. Along the cliff edges are dense and thrifty stands of spruce and poplar, their colors kept fresh by the flying spray. The Alexandra falls are not in themselves the sole item of beauty here, though splendid views may be obtained from several points. It is in the drop of the entire river that one is most impressed with a sense of unlimited majesty and power.

The river, after flowing a mile through the canyon, comes to a second break and drops fifty feet, this time forming Louise Falls. When one approaches up the beach of the lower gorge and rounds the point, the Louise Falls may be seen to best advantage. Between the high walls of darkly wooded cliffs is a bit of fairland, a band of silver pouring out of the darkness into light.

These falls were discovered by Dr. W. C. Bumpas, Anglican Bishop of Mackenzie River, in 1872 when on a trip down Hay River, and were named by him Alexandra and Louise respectively, in honor of the Queen and the Princess Louise.

Farm Home Should Have Name

And It Should Appear On Products Offered For Sale

"Name your farm home" is the slogan of a movement fostered in Tennessee for the past four years. More than 3,000 homes have already been named, according to a report received by the United States department of agriculture. Farm home owners are urged to give some thought and trouble to the selection of the right name. It should be dignified, snappy, lasting, not only common, easy to say, easy to read, and easy to remember. It should appear on the mail box or over it, or on a signboard, or on the gate. It is intended that it should be used on letterheads and on the label of anything sold from the farm. The indirect effect of the name can often be seen in the grading and standardizing of products offered for sale.

Clean Horses By Vacuum Method

Curry Comb and Brush Not Needed For Dabbin With This Process

United States army horses and mules at Fort Benjamin Harrison, near Indianapolis, are being cleaned by the vacuum method. Furthermore, even the mules do not object. The contraption was invented by Capt. A. C. Fitzhugh, 3rd Field Artillery. It follows the general fashion of vacuum cleaners, with certain special features adapted to use with animals.

The new device is said to have solved the problem of caring for extra animals with a minimum of effort and time and results in a more thorough job of cleaning than was ever possible with curry comb and brush. The nozzle of the machine is equipped with a brush of special design.

The Average Tip

A wealthy man asked a Pullman porter the amount of his average tip. The negro replied that the average amount was one dollar. The disgustingly lucre-laden personage handed him a dollar, whereupon the porter exclaimed, "Yassuh, boss, but you am de fust passon what has ever come up to the average."—Marketing, Toronto.

Spring isn't perfect. A spade can become just as hateful as a snow shovel.

1. The Wreath Placed by Lord Byng at Vancouver. 2. His Excellency Talking to C.P.R. Policeman Mayor L. D. Taylor of Vancouver. 3. Lady Byng Talking to Governor-General Byng and Sid Heasman, his former chauffeur in France.

Final Official Tour of Governor-General Byng

Lord Byng, Governor-General of Canada, and Lady Byng made a tour of Canada recently, leaving Ottawa on a special Canadian Pacific Railway train for the trip. This was the last tour the Governor-General made officially across the Dominion. The vice-regal party bade farewell to the great granary of the West, the Canadian Rockies and the Pacific Coast.

From Ottawa the party went on an eleven-hour non-stop run to Windy Lake in the mining district of Northern Ontario where they rested for the night. The next day they left for Nipigon and on to Twin Cities, Port Arthur and Fort William, at the head of the Lakes. The party spent several days in Winnipeg, where Lord Byng saw several of his many friends.

The train made an overnight stop at the Indian Reserve at Morley, continuing the following morning through the Rockies where they viewed some of the world-famous beauty spots at Wapta, Field, Twin Butte and Notch Hill. On the way across Lord Byng suffered on account of his leg, but at Vancouver he was sufficiently recovered to receive the ovations of huge crowds of cheering citizens. Here Lord Byng attended public receptions and laid a wreath on the monument "To Our Glorious Dead, 1914-1919." His Excellency planned to be back in Ottawa by June 1.

Strange, Romantic Love Adventures of the Flapper you know!

Joanna

by H. L. GATES

Copyright 1925 by H. L. GATES

Published by arrangement with First National Pictures, Inc.

CHAPTER V.—(Continued)

"Say, you!" she said, her lips set, "you're just about the same as a new fun in an old pair of stockings to me, but you're running the wrong way. We're saying goodbye now, and we'll probably never say hello again, but I'd like you to remember that you were in on the start of something today that's going to have a big finish."

He made no reply, but just looked at her, somewhat sorrowfully. She added, irrelevantly it seemed:

"And it didn't start the way you think and it won't finish the way you expect, take it from me!" Then, her flowers hugged close, she went into the house.

Mrs. Adams was a dear old soul, or a mean old termagant, according to whether you owed your room rent or not. Not that she was so much different, under the latter circumstances, but the general aspects of her seemed different. As a matter of fact, she was good for four weeks of arrears for any girl and after that, why, as many more as a girl required if she was in real hard luck and actually trying to get out of it. Joanna, herself, had once comforted a girl friend, who had mortgaged her room rent for two weeks ahead on a dress.

"You say you had a thousand dollars to pay for that coat Joe?" Mrs. Adams interrupted again.

The girl began slowly, deliberately, with infinite detail, an account of the summons conveyed through "Good Morning," and her recollections while she waited in Mr. Graydon's office. Then her words hurried; she became excited; she talked fast; she got up and stood in the middle of "the drawing room only" and talked with her arms as well as her lips. She was just about to arrive at the bank, in her recital, when Mrs. Adams, who had been listening patiently, interrupted:

"Tell me; where'd you get that new coat, Joe? It's mink, isn't it? And it's real mink, too, or I've lost my eyesight!"

RESTORED TO GOOD HEALTH

Mother of Eleven Children
Praises Lydia E. Pinkham's
Vegetable Compound

Her Interesting Experience

Buckingham, Quebec—"I am the mother of eleven living children, and my baby is five months old. I am only 28 years old and I have taken Lydia E. Pinkham's Vegetable Compound for weakness and my nerves. I knew of it from my sister, Dame Edouard Bellevue of Ramsayville. For five years I was in misery and was always ready to cry. Now I am so happy to have good health. My daughter, who is 18 years old, has also taken it and will be happy to recommend it to all young girls."—DAME EDWARD BELLEVUE, Box 414, Buckingham, Quebec.

Why suffer for years with backache, nervousness and other ailments common to women from early life to middle age, when Lydia E. Pinkham's Vegetable Compound will give you relief?

In a recent country-wide canvass of purchasers of Lydia E. Pinkham's Vegetable Compound, over 250,000 replies were received, and 98 out of every 100 reported they were benefited by its use.

W. N. U. 1630

to the million dollars the laudatory patted her hair and tucked in a grey wisp that hung down behind; but when the girl came to the end she was silent, motionless, and she kept her hands folded in her lap.

Joanna went over and kissed her on the top of her head, lightly. She didn't respond to that, which Joanna understood. It was a lot of news that had been thrown at her.

"Now I'm going upstairs and try to cry," said Joanna, gathering her new coat on her arms and giving the bundle that held her old one a kick into a corner where she could salvage it later. "And if I can't cry I'm going to laugh. If I can't do that either I'll try standing on my head and see if I can figure things out that way." She didn't notice a sad little shake of the head which the landlady sent her way.

She turned to the door, but stopped, and opened her bag. She selected the crispest of the five hundred dollar notes, went over to the grey-haired Mrs. Adams, showed her the size of it, and then crumpled it in the old lady's old worn fingers. Mrs. Adams, with wet, troubled eyes, looked into the girl's face, and would have said something, but Joanna stopped her by putting a hand over her mouth.

"Just keep the lid on the 'don't want to take it' stuff," she said. "I know you couldn't think of accepting it, and it isn't coming to you, and I only owe you for two weeks—but I've got to give something to somebody, haven't I?"

She was going out the door when she stopped again, and turned around. Mrs. Adams still was looking at her dully. She struck a pose that, she concluded, was particularly appropriate for the framing of a doorway—body leaning against one side of the door frame, hand stretched across to the other, and her chin turned across a shoulder into the room:

"There's one thing you can do, Mrs. Landlady-mine," she said. "You can hold in the news till I get ready to spread it, and you can keep your other flappers out of the 'drawing room only' for tonight, because my John's coming around on his regular date and when he gets here I'll need the whole darn room for a lot of heavy stuff!"

(To be continued)

A MEDICINE THAT GIVES STRENGTH

New Health Comes to Those Who Build Up Their Blood by the Use of Dr. Williams' Pink Pills.

Dr. Williams' Pink Pills are a strengthening medicine. Surely and effectively they build up the blood, invigorate the appetite, tone up the digestion, give brightness to the eye, color to the cheeks and lips, and quickness to the step. These pills have direct action on the blood, making it a health-bearing stream; thus no part of the body can escape their beneficial action. Weak men and women, boys and girls find new health and strength through the use of this world-renowned blood builder. Mr. N. H. Langville, C.N.R. agent at New Germany, N.S., says: "In November, 1924, I had a severe illness which left me in a very run-down condition. I got a supply of Dr. Williams' Pink Pills and derived great benefit from them. My appetite improved, and a gain in weight which is now normal I owe to the use of these pills. I can therefore recommend Dr. Williams' Pink Pills as a tonic."

"Try Dr. Williams' Pink Pills for anaemia, rheumatism, neuralgia, nervousness. Take them as a tonic if you are not in the best physical condition and cultivate a resistance that will keep you well and strong. Get a box from the nearest drug store or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Among the good that die young in this hard-boiled age is good manners.

It is estimated that over 3,000,000 bicycles are used in Japan.

Will Exhibit White Elephant

Sacred Beast From Burma To Tour America

America is to see a real white elephant. The sacred white elephant from Burma, which made its premier debut at the London Zoo, May 1, will remain there for four months and then go to the United States.

This elephant is a pinkish white all over and is regarded as a sacred beast in Burma. A special bungalow was erected for the animal, which cannot be sheltered with other elephants, because of its sacred character.

Cheapest of all Oils.—Considering the qualities of Dr. Thomas' Electric Oil it is the cheapest of all preparations offered to the public. It is to be found in every drug store in Canada from coast to coast and all country merchants keep it for sale. So, being easily procurable and extremely moderate in price, no one should be without a bottle of it.

And This Is England

Journalist Tells Sad Story of Americanism in London

Here is a sad story told by an English journalist in one of the London papers: "As I walked along the Strand an American clock informed that it was then 6.15 p.m. in New York City. Yellow American taxis, burning American motors, white American cars, taking people home from seeing American plays and American films, past American candy and five-and-ten-cent stores, American soda fountains and shops full of American cameras, typewriters and tooth paste. Then—this is every word true—a hansom flung past, a ghost from the '90's, and England was herself again."—New York Times.

Objects To Parole System

Prisoner's Temporary Good Behavior Does Not Warrant Freedom

Any bad man is likely to be good while he is locked up in prison. That he behaves while locked up is no reason why he should be pardoned or paroled. It needs something more than temporary good behavior to warrant the freedom of a man who has been confined by order of a judge and jury. There is some explaining to be done.—Los Angeles Times.

Miller's Worm Powders not only make the infantile system untenable for worms, but by their action on the stomach, liver and bowels they correct such troubles as lack of appetite, biliousness and other internal disorders that the worms create. Children thrive upon them and no matter what condition their worm-infested stomachs may be in, they will show improvement as soon as the treatment begins.

Long Journey Made By Bottles

Many Committed to Waves Drift Thousands of Miles Before Coming to Shore

A bottle thrown into the sea by the United States fishery bureau off Chatham, Mass., was recently picked up at Brixham, England, having accomplished its voyage across the Atlantic in just two years, says the Manchester Guardian. Similar experiments over a considerable number of years by Capt. Simpson, F.R.S., yielded some interesting results.

Of several thousand bottles which he committed to the waves about 10 per cent. were picked up in various parts of the world, and the particulars asked for in the letter enclosed in each bottle were supplied by the finders. Many of these bottles drifted 10,000 miles before coming ashore, the average rate of travel working out at about half a mile an hour. One of Captain Simpson's bottles took four and one-half years on its sea trip, in which time it travelled from Cape Town to the Shetland Islands.

Minard's Liniment for backache

May Restore Ancient Legend

Facts That Would Almost Prove Moon Has Effect On Plants

The old belief, always scoffed at by scientists, which led some farmers, religiously, to plant their crops in certain phases of the moon, may yet receive some support. Some time ago scientists began to discover that certain living creatures, notably some kinds of seaweed and some species of ocean dwelling worms, possessed a distinct lunar periodicity. They fruited or bred or came to the surface or did other quite definite things in exact correspondence with the phases of the moon. It seemed almost as though they had an almanac. Now there has come to light another fact that seems likely to explain this one.

It has been found that the kind of light called polarized light is more effective in certain of the chemical processes of life than is ordinary light. Moonlight is partly polarized. It is composed in part of this same kind of light which scientists now find peculiar in its actions on living matter. Possibly moonlight really does have a different effect on plants and animals than does sunlight decreased to the same intensity. This would explain the apparent moon knowledge of the sea worms and the sea weeds. It would restore another ancient legend of mankind to an honored place among the truths of observation.

Has Unique Privilege

One Englishman Can Keep Hat On in King's Presence

To Michael Constantine de Courcy, Baron Kingsale, belongs the unique privilege of being the only man in the United Kingdom who may, if he so elects, keep on his hat in the presence of the King of England. A hereditary prerogative granted to Sir John de Courcy in the reign of King John, for conquering Ulster, is the reason the peer enjoys this curious privilege. Historical records show the permission to have been exercised only five times, the last instance being in 1859, when John de Courcy, successor to Gerald, Lord Kingsale, stood with his head covered in the presence of Queen Victoria.

Simple and Sure.—Dr. Thomas' Electric Oil is so simple in application that a child can understand the instructions. Used as a liniment the only direction is to rub, and when used as a dressing to apply. The directions are so plain and unmistakable that they are readily understood by young or old.

Little Helps For This Week

Verily I say unto you, whosoever shall not receive the Kingdom of God as a little child, he shall not enter there.—Mark x, 15.

Do like a child, and learn and rest. Upon thy Father's arm; Pour out thy troubles on His breast, And thou shalt know no harm. Thea shalt thou by His hand be brought By ways which now thou knowest not, Up through a well-fought fight, To heavenly peace and light. —Paul Gerhard.

O Father, who are in all perfect beyond the longing of Thy children—and we are all and altogether Thine. Thou wilt make us pure and loving and free. We shall stand fearless in Thy presence, because perfect in Thy love. Oh! let the heart of a child be given to us, that we may arise from the grave of our dead selves, and die no more, but see face to face the God of the living.—George MacDonald.

Could Hardly Live for Asthma, writes one man who after years of suffering, has found complete relief through Dr. J. D. Kellogg's Asthma Remedy. Now he knows how needless has been his suffering. This matchless remedy gives sure help to all afflicted with asthma. Inhaled as smoke or vapor it brings the help so long needed. Every dealer has it or can get it for you from his wholesaler.

Find Roman Ruins In Sussex Village

Archeologist Assisted in Excavations By College Students

Students from Oxford and Cambridge passed their spring vacation in assisting S. E. Winholt, the archeologist, in his excavations near Pulborough in Sussex. It has now been definitely established that the site of the excavations saw some 2,000 years ago a road connecting the early Roman road of State Street with the main road to London. Masses of archaic pottery have been brought to light, probably belonging to the first century A.D., and iron finger rings and funeral urns have also been discovered. A pre-Roman beehive, quern and a number of flint instruments have also been discovered.

The authorities of University College, London, have decided to establish a new Danish lectureship in memory of Queen Alexandra.

Applies For Patent On New Aeroplane

Military Aviator Claims His Invention Will Not Crash

Bobist, a former military aviator, has applied for a patent on an aeroplane which will not crash. The invention is based on the fact that 90 per cent. of all aeroplanes crash to earth head-on. The invention consists of a series of counter-weights which, in the event of a perpendicular descent, are caused to slide to the rear of the plane, thereby re-establishing its balance, aided by an auxiliary rudder.

Still Enjoying Life at 84

Thanks To That Wonderful Remedy

Mrs. F. H. Miller, 1843-11th Ave. East, Vancouver, B.C., writes: "Five years ago my husband suffered terribly with severe attacks of palpitation of the heart and smothering spells, and two doctors stated that he could not possibly live six months. A friend recommended Milburn's H. and N. Pills, with the result that my husband is still enjoying life at the age of 84 years."

He has improved so wonderfully that he can now climb the stairs without having those awful pains in his heart."

Put up only by The T. Milburn Co., Limited, Toronto Ont.

News Notes

All stores and banks were closed all day Thursday in observance of the King's birthday.

More than 80 municipalities were represented at the convention of weed supervisors and inspectors held at Olds the past week. Thorough discussion of the weed campaign for the summer took place, and indications are for a vigorous prosecution of the fight against the weeds. Excellent co-operation between the various municipalities and the provincial department of agriculture in the campaign was manifest at the convention, and considerable further progress is anticipated this year in clearing the province of the weed menace.

U. F. A. Viewpoint Alberta Crop Report

This article is sent out by the Publicity Committee of the U. F. A. It is written frankly from the U. F. A. point of view.

Liberals and conservatives are viewing with alarm the alleged attempt by U. F. A. speakers to introduce the pools in politics. There is no basis for the allegation. At the same time the public have a right to know where each candidate stands with regard to the pools for there is no doubt that the crucial moment for the pools will come within the next two years. For instance, what is the position of party candidates with regard to an export duty on wheat. This was advocated by conservative speakers in the last dominion elections.

The Canadian Wheat Pool and the grain trade are both at present using all the influence they can at Ottawa with regard to No. 8, An Act to Amend the Canadian Grain Act (Warehouse Receipts) introduced by M. N. Campbell, progressive member for Mackenzie, in the Dominion House last session. The purpose of the bill is to restore to the farmer the right to determine the destination of his grain, which was taken away from him last year by an amendment. The Dominion Government first of all agreed to accept the bill as one of its own measures but as opposition developed from the grain trade the Government refused to accept responsibility for it, and it will have to run the gamut of the House. Pool officials state according to A. M. Bontilliers, M. P., that the Wheat Pool lost not less than a million dollars last year by the striking out of this protection for the farmers. "Who got the million?" "What is the stand of the conservative and liberal parties on this matter?" The vote of the House will show.

The offer of the Wheat Pool to lease the Vancouver Harbor Elevator is another matter that will be discussed in the Dominion House.

Seeding of all grain crops in the province is now practically completed.

Conditions continue to be generally satisfactory. The weather since last report has been showery and most of the districts in the province have benefitted thereby. Precipitation for May to date has ranged from half an inch in most districts to nearly two inches in the Grande Prairie and Peace River districts.

In the irrigated areas in the south the first crop of alfalfa is approaching the first harvest period and is in excellent condition. Thinning of sugar beets has commenced and all irrigation operations are proceeding briskly.

News Notes

These new Ford cars have been purchased recently from King Motors; light delivery by Thos. Court, sport model by C. W. Swanson, Tudor Sedan by Octave Ursebach and a Tudor sedan by Golden Woolf.

Orvin Nielson of the local branch of the Bank of Montreal enjoyed a few days visit from his brother Leo, of Cardston. Leo recently returned from a mission spent in Winnipeg.

Mrs. George Mangin (nee Miss Dora Corless) is expected home on a short visit in the near future.

The grain trade oppose this. What will be the position of liberals and conservative members?

Alberta wishes a representative from this Province on the Vancouver Board. Rumor has it that the appointment, which is made by the Dominion, will be deferred till after the Provincial election, and that coast liberals have insisted on one of their number being appointed. What will be the position of the Dominion Liberal Government?

Want Ads Pay Big

An Experiment That Succeeded

Five years ago the people of Alberta, disgusted with the failure of Party Government to function to the advantage of the province, defeated the candidates of the party machines, and experimented with a Government composed of men with no previous parliamentary experience, but actuated by a desire to serve the people's interests.

Five years have elapsed since that election. The Government formed then, goes back to the electors this month for their verdict.

The party machines are doing their utmost to defeat the only business and non-party Government the Province has ever had. U. F. A. candidates are responsible to their constituents, not to Ottawa. They have no blessings from Mackenzie King or Meighen, no patronage to distribute, no promise to make but that of continued good Government.

The members of the U. F. A. have subscribed funds and contracted for this space in the Raymond Recorder and in the limited time and space available from now until election day will endeavor to broadcast the facts. Further facts will be given at U. F. A. meetings to be held in your district, at which your attendance is invited.
